9. [Roles & Permissions](#)

1. Getting Started

Accessing OrgVault

Open your browser and go to your OrgVault URL. You'll see the login page with the OrgVault shield logo on the left and the sign-in form on the right.

Creating an Account

- 1 On the login page, click "**Don't have an account? Create one**"
- 2 Fill in your **Full Name**, **Organization Name**, **Email**, and **Password** (minimum 12 characters)
- 3 Click "**Create Account**"
- 4 You'll be automatically logged in and taken to the Dashboard

Tip: The first person to register becomes the **Organization Admin**. A superadmin can promote you to additional roles later.

Logging In

- 1 Enter your **Email** and **Password**
- 2 Click "**Sign In**"

You'll be taken directly to your Dashboard. Your session lasts 24 hours before you need to log in again.

Logging Out

Click "**Sign Out**" at the bottom of the left sidebar.

2. Dashboard

The Dashboard is your home screen. It shows:

Stats Cards

Card	What it shows
------	---------------

Total Files	Number of files stored in your organization
Folders	Number of folders used to organize files
Storage Used	Total storage space consumed (auto-formatted)
Synced to Cloud	Number of files backed up to cloud storage

Recent Files

Shows your 5 most recently uploaded files with name, size, date, sync status, and tags. Click "**View all** →" to go to the Files page.

3. File Management

The **Files** page is where you upload, organize, and manage all your documents and files. Access it by clicking **Files** in the left sidebar.

Uploading Files

There are two ways to upload:

- 1 Drag & Drop:** Drag files from your computer onto the dashed upload zone
- 2 Browse:** Click the "**Upload**" button or click anywhere in the upload zone to open a file picker

Tip: You can upload multiple files at once. Maximum file size is **500 MB** per file. Files are encrypted with AES-256-GCM before storage.

Organizing with Folders

When uploading, you can assign files to a folder. Use folder names like `invoices/2024` for nested organization. Click a folder in the folder grid to filter files within it. Use the breadcrumb trail at the top to navigate back.

Tagging Files

Add tags when uploading to categorize files (e.g., `invoice` , `confidential` , `draft`). Click any tag on a file to filter the file list by that tag. Remove the tag filter by clicking the **X** on the active tag pill.

Searching Files

Use the search bar to find files by name. Search works across your current folder and updates results as you type.

Downloading & Deleting

Hover over a file row to reveal action buttons:

Action	Button	What it does
Download	↓	Downloads the decrypted file to your computer
Delete	🗑️	Soft-deletes the file (recoverable by admin)

Important: Deleted files are soft-deleted (hidden but retained). Contact your admin for permanent deletion.

4. Data Records

The **Data Records** page lets you store structured data in custom tables — perfect for contacts, invoices, inventory, or any tabular data. Access it via **Data Records** in the sidebar.

Creating a Table

- 1 Click "**New Table**" at the top right
- 2 Enter a name (e.g., `Contacts` , `Invoices`)

- 3 Press **Enter** or click "**Create**"

Your table appears in the left panel. Click it to view records.

Adding Records

- 1 Select a table from the left panel

- 2 Click "**Add Record**"

- 3 Enter JSON data in the editor:

```
{  
  "name": "John Doe",  
  "email": "john@example.com",  
  "phone": "+234 800 000 0000"  
}
```

- 4 Click "**Create**"

Tip: Records are stored as flexible JSON — each record can have different fields. Use the **Copy** button to duplicate JSON structure.

Editing Records

Hover over a record and click the  **Edit** button. Modify the JSON in the editor and click "**Update**".

Deleting Records & Tables

Hover over a record and click  **Delete**. To delete an entire table, hover over it in the left panel and click the trash icon. **This removes all records in that table.**

Searching Records

Use the search bar above the record list to filter records by their JSON content.

5. Companies

Organizations can have multiple **companies** (sub-tenants) to isolate data between departments or subsidiaries. Access via **Companies** in the sidebar.

Adding a Company

- 1 Click "**Add Company**"
- 2 Enter the company name
- 3 Press **Enter** or click "**Create**"

The company appears in the table. Users can be assigned to companies for data isolation.

6. User Management

The **Users** page lists everyone in your organization with their roles. Access via **Users** in the sidebar.

Viewing Users

Each user row shows:

Column	Description
Avatar + Name	User's initial and full name
Email	User's email address
Role	Colored badge showing permission level
Joined	Date the user joined the organization

Adding Users

New users register themselves from the login page using the **same organization name**. They automatically join your organization with the **member** role.

Tip: Share your organization name with team members so they can join during registration. A superadmin can promote them afterward.

7. Organization Settings

Access settings via **Settings** in the sidebar.

General

Setting	Description
Organization Name	Change your organization's display name
Organization ID	Read-only unique identifier (used internally)

Click **"Save Changes"** after editing.

Security Status

The Security section displays your current protection status:

Feature	Status
Encryption at Rest	AES-256-GCM — Active
JWT Authentication	24h tokens with refresh rotation — Active

Danger Zone: The Delete Organization option permanently removes all data — this function is restricted to prevent accidents.

8. Security

Encryption

Every file uploaded to OrgVault is encrypted with **AES-256-GCM** before being written to disk. A unique encryption key is derived for each file using PBKDF2 from a master key, ensuring no two files share the same encryption key.

Authentication

- **Passwords** are hashed with Argon2id — the industry standard
- **Access tokens** expire after 24 hours
- **Refresh tokens** rotate on each use and expire after 7 days
- **Rate limiting** protects login endpoints from brute-force attacks

Audit Logging

All mutating operations (uploads, deletes, record changes) are logged with timestamps, user IDs, and IP addresses. Audit logs are immutable and available to admins.

Data Isolation

All database queries are automatically scoped to your organization. Companies provide an additional layer of isolation within your org.

9. Roles & Permissions

Role	Badge	Permissions
Superadmin		Full access across all organizations. Can promote/demote users, delete organizations, access all data.
Org Admin		Manage their organization: add companies, view all files/records, manage users within their org.

Company Admin	company_admin	Manage a specific company: files, records, and users scoped to that company.
Member	member	Upload files, create records, edit own data. Cannot manage users or org settings.
Viewer	viewer	Read-only access: view files and records but cannot upload, edit, or delete.

OrgVault · Hybrid Secure Data Storage · Version 1.0

Built with AES-256-GCM encryption · Argon2 authentication · Role-based access control
